Metso offers a wide range of solutions and services for automation and information management application networks and systems, field control technology and life-cycle performance management.

Our main customers are the power, oil and gas industries as well as the pulp and paper industry.

Metso and environmental business

Environmental business in the core of the strategy

Metso and environmental business

A definition

- Derives from Metso's products and services that provide best available solutions to improve the environmental performance of Metso's customers
- The focal areas are:
 - Energy efficiency
 - Waste management
 - Recycling
 - Water treatment
 - Environmental consultation and
 - Optimizing processes

Metso and environmental business

A definition

- A commitment to using Metso's products and solutions to combat global environmental challenges, such as climate change and the depletion of natural resources
- Most environmental technology solutions are based on innovations or improvements related to processes – process technology expertise is, in fact, Metso's core area of competence in the company's development of environmental business

Expectations to CEWIC co-operation
